Education

McMaster University

Sep 2026 - Apr 2031

Honours Bachelor of Computer Science

Hamilton, Canada

- First-year undergraduate student; expected graduation: 2031
- Relevant Coursework: AP Statistics, AP Computer Science, AP Calculus BC, AP Physics 2, Computer Engineering.

Experience

Software Engineering Intern

Jun 2025 - Sep 2025

Canadian Imperial Bank of Commerce (CIBC)

Toronto, ON

- Developed an **Automated Risk-Assessment Engine** that improved internal loan processing speeds by 60% by categorizing credit applications and auto-populating risk-profile reports for internal decision workflows.
- Fine-tuned a BERT-based classifier to extract key risk indicators from financial documents, improving the accuracy of automated analysis across staging and production environments for internal risk teams.
- Created a Real-Time Monitoring dashboard using **React and Django**, deployed via **Jenkins** to ensure seamless updates and automated unit testing across staging and production environments for internal operations teams.
- Worked with: Python, SQL, JavaScript, TensorFlow, Django, React, Jenkins, and Postman.

STEM Workshop Organizer

Jun 2024 – Present

Peel District School Board

Peel Region, ON

- Designed and delivered a hands-on software development curriculum where students built full applications using **React, Flask, TensorFlow, and AWS**.
- Mentored **100+** students in programming concepts including **Python, JavaScript, and C++** through guided coding projects.
- Delivered project-based workshops on coding, circuit building, and hardware-software systems using **React, Flask, TensorFlow, and AWS**.

Organizations

Jun 2023 – Present

Various

Brampton, Canada

- **Microsoft Reactor Program Participant:** Engaged in developer workshops on cloud computing, AI systems, and modern software engineering practices, learning directly from Microsoft engineers and industry professionals.
- **Google Developer Student Clubs:** Collaborated with student developers to build software projects, attend hands-on technical workshops, and explore emerging technologies in AI, cloud, and full-stack development.
- **DECA: 2x Internationals qualifier.** Won best overall in Ontario for Business Law and Ethics.
- **Speech Club President:** Organized events to help **120** students build public speaking and communication skills.

Award Winning Projects

QuantAlpha: High-Frequency Arbitrage Engine | *C++, Python, PyTorch, Apache Kafka, gRPC, Docker*

- Developed a low-latency arbitrage bot using C++ and PyTorch, achieving a sub-15ms end-to-end execution pipeline.
- Engineered a Transformer based time-series model to predict price drops with **88% precision** across crypto exchanges.
- Optimized data ingestion using Apache Kafka, handling a throughput of 1.2 million market events per second.
- Backtested strategies on 1TB of historical order book data, resulting in a simulated Sharpe Ratio of 3.1 over 6 months.

NeuroScribe: Multimodal Medical Imaging Pipeline | *Python, PyTorch (Lightning), MONAI, AWS S3, React, FastAPI*

- Architected a **3D medical image segmentation pipeline** using Swin-UNETR to identify glial tumors in MRI scans.
- Integrated SHAP (SHapley Additive exPlanations) to provide heat-map interpretability for radiologists, **increasing diagnostic confidence by 18%** in user trials.
- Built a secure backend using FastAPI and AWS S3 that handles asynchronous inference for large volumes.

Skills

Programming: Python (ML, CV, OOP), C++, JavaScript, Next.js, MERN Stack, MySQL, C, Java, Linux, Bash, Arduino.

Technical: Data Structures & Algorithms, Cloud Computing (AWS), Tensorflow, Scikit-Learn, Git, Jira, Agile.

Competitions/Certificates: Euclid/CCC Waterloo Math Contests (top 15%), DECA Internationals, Harvard CS50

Fun Facts: I produce music in my free time, play basketball, and enjoy math!
